

## INDIVIDUAL PROJECT ADDENDUM

**Name:** Nikhil Divi

**Role:** Frontend Developer, UI/UX Designer

### 1. Personal Contribution

I led the frontend development and UI/UX design. I created the HTML templates, styled pages with CSS, and ensured layout responsiveness. I also helped connect frontend forms with backend routes and tested usability across different screen sizes.

### 2. Skills Applied and Gained

- Strengthened skills in HTML/CSS and responsive design
- Learned to use Flask templating (Jinja2)
- Practiced cross-browser compatibility testing and UI debugging

### 3. Challenges Faced

A key challenge was making the layout responsive on small screens, especially aligning forms and buttons. I resolved this through trial-and-error CSS adjustments and testing with browser dev tools. Integrating forms with Flask templates also required coordination with the backend team.

### 4. Reflection

Our UI turned out clean and functional. Next time, I'd start responsive design earlier and set up reusable components to save time.

### 5. Teamwork

Evaluation I communicated regularly and helped test backend functionality. As a team, I think we did well but could improve by assigning tasks with clearer deadlines.
